Full Stack Developer · Next.js · React · TypeScript · Laravel · UX/UI Designer

PROFESSIONAL SUMMARY

Full stack developer with two years of experience on production software, and a UX/UI designer with design systems of my own. I cover the full cycle: interface, server, data and infrastructure. I also maintain software of my own in real use, operated by people other than me. Native Spanish speaker (Argentina); English at B2 level (EF SET 57/100).

TECHNICAL SKILLS

Frontend: Next.js, React, TypeScript, JavaScript, Tailwind CSS, HTML5, CSS3, accessible and reusable components
Backend and APIs: PHP and Laravel (MVC, Eloquent, migrations, request validation), Node and Express, Next.js API Routes, RESTful API design, Prisma, Zod, JWT authentication
Data and real time: PostgreSQL, MySQL, Prisma, Drizzle, relational modelling and migrations; Socket.IO and WebSockets with room-based isolation
UX/UI design: Figma, UX research, competitive benchmarking, prototyping, design systems
Cloud and deployment: Azure and Google Cloud, data pipelines, orchestration with Airflow, Docker, automated deployment
Practices: Code review, pair programming, testing, version control with Git

PROFESSIONAL EXPERIENCE

Semi Senior Web Developer

Lisicki Litvin & Asociados | September 2025 - present | Hybrid, Argentina

- I build web modules and applications for the internal teams of an organisation of around 600 people, integrating them with the services, APIs and business logic already in place.
- I cover the full cycle of each module: I design the interface in Figma and then implement it, with no handoff translation between design and development.
- I built the integration layer for a client that moved from exchanging files over FTP to exposing an API: Azure Data Factory converges the calls against a Function App, with no step through Blob Storage, with pipelines organised by data domain. The Function App holds the control of each ETL stage, the stored procedures and the tables at each level.
- I designed and built on Google Cloud the automation of a process a client was handling by hand in Excel and PowerPoint: integration with IBM Planning Analytics, normalisation of the raw data, ETL over BigQuery, calculations in a Cloud Run service and scheduling with a Cloud Composer DAG. I separated the stages with scaling in mind: the result lands in a table that Power BI consumes today and any application could consume.

Junior Web Developer

Lisicki Litvin & Asociados | September 2024 - August 2025 | Argentina

- Resolved bug and error tickets on a production PHP/Laravel and JavaScript codebase, within a team of 5 developers.

Front End Developer

El Placard de mi Bebot | June 2024 - July 2024 | Argentina

- Built a dynamic web application for El PLAC, the company's second business line, unifying and automating processes that until then were manual.
- Implemented a differentiated role system that improved internal management and the user experience.

Full Stack Teaching Assistant

Henry | May 2024 - August 2024 | Remote, Argentina

- Reviewed and corrected the submissions of around 20 students in HTML5, CSS3, JavaScript and React, explaining in each case the error and the correct alternative.
- Graded daily the same assignments the instructors graded, which kept my technical judgement calibrated against theirs.
- Coordinated the group, ran pair programming sessions and proposed improvements to the bootcamp process based on what I gathered from the students.

SOFTWARE IN PRODUCTION

Urban — Live projection system

Personal project | in use since May 2026 | github.com/RicardoNigrelli/live-worship-projection

- Projection system for live services: an operator panel controls lyrics, slides and media, and the connected displays stay in sync in real time, with room-based isolation for simultaneous services.
- I designed the architecture separating operator from display, which allows the projection to be controlled from any device without being at the projector machine.

- Three people operate it: content management and playlist building between services, and live projection at the monthly service.
- Stack: Next.js 14, TypeScript, Node and Express, Socket.IO, Prisma + PostgreSQL, Cloudinary.

Urban — Songbook
Personal project | in use by a team of 5 people

- Songbook for music teams: songs with chords, key transposition and personal capo, setlists with call-ups and attendance confirmation, and a music stand view accessible either authenticated or through a public link.
- Role-based permissions (leader, editor, member) with passwordless sign-in. I document and run end-to-end QA passes against production, exercising every flow with all three roles before release.
- Stack: Next.js, TypeScript, Drizzle ORM + PostgreSQL (Neon), Web Push, Zod.

UX/UI DESIGN

Urban — Web design system
Personal project | 27 documented sections

- Design system for Urban's sites, built on the existing brand identity: colour system, typography, grid, motion, accessibility, CSS tokens, component inventory and interface QA before sign-off. Applied it across three sites from a single system, with a handoff specification and documented UX research.

Safer dating — UX research
Research and prototyping | 2024 | public presentation | linked from the portfolio

- Research on safety in dating applications: user interviews, competitive analysis, personas and journey maps. Identified 5 safety problems and proposed 3 features, with a high-fidelity prototype validated in usability testing.

TribuXmusic — Product and interface design
Figma | 2025 | public file | linked from the portfolio

- App for discovering concerts and booking tickets: from the UX report and hand-drawn wireframes to the final screens, with a component library, style guides and usability testing.

PUBLISHED PROJECTS

Live subtitles for conferences
Nerdearla Vibeathon 2026, 24-hour hackathon | open source | github.com/RicardoNigrelli/subtitulos-en-vivo

- Live transcription and translation for several sessions in parallel; each viewer picks a session and a language.
- Built solo in 24 hours with AI coding agents. Reproducible from the README: two simultaneous live sessions of about 11 minutes, with no gaps in the transcript.
- Stack: Python (asyncio, websockets, aiohttp), Gemini Live API and Flash-Lite, JavaScript, Docker Compose, pytest.

Electronic invoicing, ARCA/AFIP
NestJS backend | public demo with a simulated AFIP | nestjs-facturacion-electronica-demo.vercel.app

- Service issuing electronic tax receipts against ARCA/AFIP (WSAA + WSFEv1), with asynchronous processing, strict idempotency and traceability of every operation through to its CAE. The published copy always runs against a simulated AFIP, enforced in code.

Personal Finance Manager
Household finance dashboard with local AI | public demo | gestion-finanzas-demo.vercel.app

- Finance dashboard for households that runs a language model locally, without sending data to external services.
- Stack: Next.js 16, TypeScript, SQLite + Prisma, NextAuth, shadcn/ui, Recharts and a Python sidecar with llama-cpp on a local GGUF model.

EARLIER EXPERIENCE

Sales representative at PepsiCo, Distribuidora Ronaldo and In-Store (2018-2024): client portfolio in Buenos Aires City, training new sales reps and managing point-of-sale budget. Volunteer at ABUA (2019-2024): leading groups and mentoring teenagers and young adults.

EDUCATION AND LANGUAGES

BSc in Psychology (in progress) — Universidad Abierta Interamericana (UAI), 2021 - expected December 2027
Google Cloud Computing Foundations — Google Skills / Talento Tech, 2026
Full Stack Developer — Henry, 2024
Advanced UI — Talento Tech, 2025
UX/UI Design — Talento Tech, 2024
Languages: Spanish native; English B2 Upper Intermediate (EF SET 57/100)
